

## **FHC Sliding Door Roller Assembly - 1-1/4" Plastic Wheel - Steel Ball Bearings - Grooved Edge (Single Pack)**

**Item No.** D1512

### **Features, Advantages, and Benefits**

- Used to repair patio sliding doors with missing, damaged or malfunctioning roller assemblies

- Concaved (grooved) edge wheels designed to glide on a single raised aluminum or steel track
- Adjustable steel housing with a 1-1/4 in. plastic wheel and steel ball bearings
- See manufacturer model number D 1579-1 stainless steel repair cap for damaged tracks
- Used by multiple sliding glass door manufacturers

**Description:** Overview This sliding glass door roller assembly is constructed from steel and features a height-adjustable housing. The concaved (grooved) edge wheels installed in these roller assemblies are constructed of plastic and include steel ball bearings for smooth and long-lasting operation. The wheels are designed to glide on a single raised aluminum or steel track. This item includes only one roller assembly per package, but a total of 2 roller assemblies are required for each sliding door. These roller assemblies are used to repair patio sliding doors with missing, damaged or malfunctioning roller assemblies. Installation easy to install with a few simple tools. Refer to dimensional line drawing to match product specifications.
