Item No. F2533

Features, Advantages, and Benefits

- Corrosion Resistant Diecast Metal
- Designed for Use with Vertical Sliding Single and Double Hung Windows
- Features a Standard, Cam Locking Feature
- 2-1/4" Hole Centers

Description: <h2>Overview</h2><p>Do you have any vertical or horizontal sliding windows with loose-fitting, worn or missing locks? Besides adding a “new look” to your windows with a fresh set of locking hardware, these sash locks can help add peace of mind by restoring the security features on your sliding windows. These locks feature a design that allows them to lock single-hungs, double-hungs and some horizontal sliding windows. Each lock features a cam-type locking mechanism that mounts on the checkrail of the innermost sash and engages into the keeper that mounts onto the checkrail of the outermost sash. The upper, outermost sash on vertical sliding windows determines if it is a “single hung” or “double hung.” If the upper, outermost sash is non-movable, then it is a single hung window. A “double hung” window refers to both sash having the ability to slide up and down for ventilation purposes, and these sash locks can fit on both model types, in addition to some left/right horizontal sliding windows. The locks are constructed of diecast zinc and come in a corrosion-resistant, industry standard, white-painted finish to match other existing hardware that may already be in the home or office. Depending on the size of the sash, these locks can be used as singles or in pairs. Each set includes one lock, one keeper, installation fasteners and simple instructions. Installation of these locks is quick and easy and can be done with a simple handheld Phillips head screwdriver. Other design features include a 5/16 inch narrow keeper, cam-action fastening, and 2-1/4 inch mounting hole centers. Compare the style and dimensions of this lock to those required on your sliding windows and order yours today.</p>
