

FHC Sash Lock - 2-1/8" Hole Centers - Fits Single And Double Hung Windows - Diecast - White - (Single Pack)

Item No. F2554

Features, Advantages, and Benefits

- For use on vertical sliding windows constructed of wood, vinyl and aluminum

- These locks mount on the check (or “meeting”) rails of single and double hung sash where their checkrails rest flush when closed
- Replacing loose-fitting, worn, or missing sash locks can help restore and increase the safety and security of the home or office
- Features cam-type locking mechanism designed to grab and pull the keeper and meeting rails firmly together, providing tighter seals and increased security
- The lock body has mounting holes that are spaced apart at 2-1/8 inches, on center

Description: Overview Do you have vertical sliding windows with loose-fitting, worn or missing locks? Besides adding a “new look” to your windows with a fresh set of locking hardware, these sash locks can help add peace of mind by restoring the security features on your vertical sliding windows. These Trimline cam locks can mount on most single-hung and double-hung vertical sliding windows constructed of wood, vinyl and aluminum. Each lock features a cam-type mechanism that is designed to draw the keeper in firmly towards the lock, providing your windows with tighter seals, better weatherizing, and increased security. They are constructed of durable diecast zinc, and come in a corrosion-resistant, industry standard white-painted finish to match other existing hardware that may already be in the home. Depending on the size of the sash, these locks can be used as singles or in pairs. Each set includes one lock and keeper, installation fasteners and simple instructions. Installation of these sash locks is easy and can be done with a simple handheld Phillips head screwdriver. Other design features include cam-action fastening, 2-1/8 inch mounting hole centers on both the lock and keeper, and alignment lugs that serve to prevent sash rattling from the exterior to disengage lock. These sash locks mount on vertical sliding windows where the checkrails (also known as “meeting rails”) of both the inner and outer sash rest flush. Compare the style and dimensions of this lock to those required on your sliding windows and order yours today.
