

**FHC Sash Lock - Single Unit - Diecast Construction - White Powder Coat W/ Enamel Finish - Designed For Single & Double Hung Windows (Single Pack)**

**Item No. F2744**

**Features, Advantages, and Benefits**

- **BUILT TO LAST** – This Prime-Line sash lock is diecast constructed, creating a solid single unit built to withstand the test of time.
- **VERSATILE ADAPTABILITY** – The single element sash lock can be used on both single and double hung vertical sliding windows, adapting to both wood and vinyl constructed frames.
- **CONTEMPORARY DESIGN** – The Prime-Line sash lock is powder coated with a white enamel finish, accentuating any window unit with a clean and fresh appearance.
- **PRIME-LINE GRADE** – We specialize in repair and replacement hardware products for your home. Prime-Line's commitment to quality results in repairs which look as good as the initial install, making us the go-to solution for our loyal customers.
- **SIZING** - This sash lock has 2-1/4" mounting hole centers with a 3/8" latch projection that engages into the fixed rail of the top sash.

**Description:** Overview Do you have vertical sliding windows with loose-fitting, worn or missing locks? Besides adding a “new look” to your windows with a fresh set of locking hardware, these sash locks can help add peace of mind by restoring the security features on your vertical sliding windows. These Trimline cam locks can mount on most single-hung and double-hung vertical sliding windows constructed of wood, vinyl and aluminum. Each lock features a cam-type mechanism that is designed to draw the keeper in firmly towards the lock, providing your windows with tighter seals, better weatherizing, and increased security. They are constructed of durable diecast zinc, and come in a corrosion-resistant, industry standard white-painted finish to match other existing hardware that may already be in the home. Depending on the size of the sash, these locks can be used as singles or in pairs. Each set includes one lock and keeper, installation fasteners and simple instructions. Installation of these sash locks is easy and can be done with a simple handheld Phillips head screwdriver. Other design features include cam-action fastening and 2-1/4 inch mounting hole centers on both the lock and keeper. These sash locks mount on vertical sliding windows where the checkrails (also known as “meeting rails”) of both the inner and outer sash rest flush. Compare the style and dimensions of this lock to those required on your sliding windows and order yours today.
