

**FHC Sash Lock - Deep Offset Latch -  
9/32" Projection - Fits Single And  
Double Hung Metal Windows - Diecast  
- White-Painted - (Single Pack)**

**Item No. F2756**

**Features, Advantages, and Benefits**

- For use on single hung and double hung vertical sliding windows constructed of aluminum frames by Acorn and other manufacturers
- Used without a keeper, these window sash locks mount atop the innermost sash and engage into the checkrail of the top sash
- Replacing loose-fitting, worn or missing sash locks can help restore and increase the safety and security of the home or office
- These cam-action sash locks feature a deep offset latch with a 9/32 inch latch projection that engages into the checkrail of the upper sash
- The lock body has mounting holes that are spaced apart at 2-1/4 inches, on center

**Description:** Overview Do you have vertical sliding windows with loose-fitting, worn or missing locks? Besides adding a “new look” to your windows with a fresh set of locking hardware, these sash locks can help add peace of mind by restoring the security features on your vertical sliding windows. These locks feature a design that allows them to lock aluminum-framed single-hung and double-hung vertical sliding windows without the need of a keeper. Each lock features a cam-type locking mechanism that mounts on the top checkrail of the bottom, innermost sash, and engages into the bottom checkrail of the upper, outermost sash. The upper, outermost sash determines if the window is “single hung” or “double hung.” If the upper, outermost sash is non-movable, then it is a single hung window. A “double hung” window refers to both sash having the ability to slide up and down for ventilation purposes, and these sash locks can fit on both model types. The locks are constructed of diecast zinc, and each feature a deep offset latch. They come in a beautiful, industry standard white-painted finish to match other existing hardware that may already be in the home or office. Depending on the size of the sash, these locks can be used as singles or in pairs. Each set includes one lock, installation fasteners and simple instructions. Installation of these locks is quick and easy and can be done with a simple handheld Phillips head screwdriver. Other design features include a 9/32 inch latch projection, cam-action fastening, and 2-1/4 inch mounting hole centers. Compare the style and dimensions of this lock to those required on your sliding windows and order yours today.
