Description:

Overview

The **FHC Phenolic Straight Edges** are created by the impregnation of layers of a substrate with a resin then formed utilizing heat and pressure resulting in one of the best durable material that won't observe the cutting fluids or warp like the Wooden Edges do.

NOTE: To prevent warping/bending of **Straight Edge** always store them by hanging them or laying flat after each use. **Do not lean against a vertical surface / upright for a long period of time.** * Always wear the with glass. Failure to do so may
