- Features a Keeperless Locking Mechanism That Allows The Latch to Engage Into The Upper Sash
- Easy to Install with Only a Few Simple Tools
- For Further Dimensional and Specification Information, Please See The Line Drawing
- A Phillips Head Screwdriver is Required for Installation

Description: Overview This sliding window sash lock is constructed of diecast materials and comes in a corrosion-resistant, black-painted finish. The mounting holes are spaced evenly apart and measure 2-1/4 in. from center to center, with a 5/32 in. reach. This style of sash lock does not use a separate keeper, because the latch engages directly into the fixed rail of the stationary sash to lock the window. It is designed for use on vertical sliding windows manufactured by Krestmark.
