

FHC Casement Handle Folding - Universal Spline - Bronze

Item No. H3960

Features, Advantages, and Benefits

- Folding Arm Reduces Projection Distance and Interference with Window Coverings
- Plastic Insert Adaptor Allows for Universal Fitting on a Variety of Operator Spline Diameters
- Constructed of Durable Die Cast Material

- Handle Constructed of Diecast Zinc
- Universal Fit with Set Screw
- Align The Adapter with The Set Screw on The Handle and Pass The Screw Through The Hole and Set Directly on Metal Spindle Shaft
- For Further Dimensional Information, Please See The Line Drawing

Description: Overview This low-profile, folding crank handle is constructed of diecast and comes in a bronze-painted finish. It features a folding arm designed to avoid interference of window blinds and coverings. Besides the typical set screw, this crank handle also includes an aluminum insert allowing the handle to fit universally on a variety of drive spline diameters. When not in use, this crank handle can be folded closed to reduce the distance of its projection away from the window, and to allow window coverings to freely hang in place, and operate as designed.
