- Used by Kenna frame and a variety of other bi-folding door manufacturers

- Roller guide shaft requires 3/8 in. inside diameter hole at the top of bi-fold door
- Fits doors ranging in thickness from 1 in. to 1-3/8 in

Description: Overview These bi-fold roller guides are constructed of steel, nylon and plastic components. They are commonly used with Kenna frame bi-fold doors, but a variety of other manufacturers also use this same size guide. These spring-loaded roller guides feature 7/8 in. outside diameter wheels that are 1/4 in. thick with a 3/8 in. outside diameter base. These guides mount on the top edges of bi-fold doors and require only a 3/8 in. diameter hole in which to insert. Use these top-mounted guides where rollers are missing, damaged or not working properly, to restore bi-fold doors to the ease of operation they were designed to have.
