- Frame material is in a bronze painted finish with bronze colored screen corners

- Aluminum frame, vinyl spline with plastic corners
- Four (4) "square-cut" plastic corners

Description: Overview These screen frame kits are constructed of roll-formed aluminum frame material and they come finished in a bronze painted color. With the components of these kits, a 48 inch x 48 inch screen frame can be constructed, as well as other smaller custom sizes when using the frame material from this kit. The components of this kit include the aluminum frame material, the "square-cut" corners and the vinyl spline. With the provided materials, screens can be made with your choice of aluminum mesh, fiberglass fabric, or flexible poly film (SCREEN FABRIC NOT INCLUDED) by following the easy-to-follow instructions provided within each kit. These kits are available in other sizes and colors, and they're used by many for the replacement damaged and missing screens. Note: The lineal pieces of the screen frame material are intentionally cambered (curved) outward, designed to prevent inward bowing when screen cloth is installed and stretched taut.
