- Used to repair or replace old style wood tracks
- The 24 in. wood rail can be cut to fit

- Kit contains 1 wood drawer track, 1 drawer guide, 1 back plate, 2 L-angles and 2 side saddles

Description: Overview This kit is constructed of a wooden track, steel brackets and a plastic guide and back plate, together with all the parts necessary to repair one wooden drawer track system. Track restores smooth operation to track mounted drawers, and it can be used for top or bottom mount installations. This universal kit allows the 24 in. wooden track to be cut down to size to accommodate for shorter drawer applications. The white plastic saddles are used to replace worn or missing guide buttons, enabling the drawers to glide easily while at the same time preventing wear on the cabinet's face frame or drawer opening. This track system is used by many to replace missing or malfunctioning drawer track hardware.
