

**FHC Handle Lock-Out Device -
Removeable And Easy To Use - Fits
Round Doorknobs With Max Diameter
Of 2-7/8" (Single Pack)**

Item No. S4181

Features, Advantages, and Benefits

- **HANDLE LOCK-OUT DEVICE** – The Defender Security handle lock-out device can be placed directly over the door lever to prevent access to the keyhole (does not prevent handle from turning).
- **COVERS KEYHOLE** – This handle security device is designed to prevent access to the locked keyhole, effectively keeping other keyholders out. It is not designed to prevent turning of the lever if the handle is unlocked.
- **REMOVABLE** – The durable diecast cylinder is held in place with an O-ring and is designed to be removable when the device is unlocked and open. The cylinder cannot be removed when the device is closed and locked.
- **DIMENSIONS** – This lock-out device can protect lever handles that have a max diameter of 2-7/16 inch. Note that the shaft cut-out is oval/oblong in shape and measures 1-3/4 inch x 1-1/2 inch, so it may fit loosely over handle with round, slender shafts. Designed to fit most lever handles.
- **APPLICATIONS** – This lock-out device is often used in evictions, rentals, home sales, on job sites, in-home, in-office storage knobs and more. It can be used in any situation where you want to prevent others with keys from unlocking the handle.
- **NOTE** - Please refer to all the dimensions and compare to your needs before purchasing

Description: Overview This lever lock-out device is constructed from diecast and comes in a gray painted finish. It is designed to mount over a locked door lever with the purpose of blocking access to the keyhole only. These are often used in evictions, rentals, home sales, job sites and in-home, or on in-office storage room knobs to prevent others with keys to the handle from unlocking the door lever. The maximum diameter of a round knob that can be secured with this device is 2-7/16 inch outside diameter. Will not work on knobs that are larger than 2-7/16 inch in diameter. Note that the shaft cut-out is oval/oblong in shape and measures 1-3/4 inch x 1-1/2 inch, and it may fit loosely over some door levers with round, slender shafts. Note: These lock-out devices are for use over keyed/locked door levers to block access to the keyhole from others who may have keys to unlock the door.
