- Single thumbscrew used to tighten
- Used on tracks no larger than 1/8 in. thick
- Extruded aluminum construction with rubber insert
- Easy to install
- 2-pack

Description: Overview This sliding window lock is constructed of extruded aluminum with a non-marring vinyl insert and a steel thumbscrew, and it comes in a milled aluminum finish. The design of this lock is manufactured to fit on older style, metal framed windows - usually of single pane glass. These locks will not work with modern vinyl windows, as the vinyl inserts have only a narrow 1/4 in. opening. For vinyl windows consider using Prime-Line parts U-9809 or U-10547. Once the lock has been mounted and hand-tightened, finish by tightening thumbscrew with pliers to securely lock windows in closed or ventilating positions. These locks are easy to install and are used by many to increase the security of their home.
