

FHC The "EDGE" Low-E Coating and Edge Deletion Detector

Item No. FHCM2030

Features, Advantages, and Benefits

- Determines if There is a Low-E Coating on the Surface of Glass
- Tests Low-E Coating in the Center of the Glass, and Edge Deletion on the Perimeter
- Illuminates when Low-E Coating is Detected

- A Necessity for Everyone in the Glass and Window Industries
- Great Option for Testing Single Panes

Description: Overview "The EDGE" Low-E Coating Detector is an inexpensive option for glass and window manufacturers who must determine if there is a Low-E coating on the top surface of the glass. This rugged little instrument is the perfect product for testing your single panes of Low-E in production. The design allows for testing Low-E coatings in the Center of the glass as well as Edge deletion on the perimeter of the coated glass. Features include an edge/stop on the bottom of the enclosure for convenient edge deletion testing.
