

FHC GLASS-CHEK PRO Glass Thickness and Air Space Meter with Low-E

Item No. FHCGC3001

Features, Advantages, and Benefits

- With one button push, the Glass-Check PRO tells you the exact replacement IG unit to order!
- Capable of Locating Low-E Coatings on Double Pane IG-Windows from a Single Side

- Easy to Use User Interface —no guesswork - just simple results.
- Language Options Include: English, Spanish, French, German, Italian, Dutch, Swedish and Danish
- Completely Portable
- Made in the USA by EDTM

Description: <h2>Overview</h2><p>The Glass-Chek PRO is suited perfectly for glass replacement, but it's perfect for many other applications as well. Whether you're installing or servicing in the field, spot checking in production, or inspecting a building, the Glass-Chek PRO simply gives you the answers you need. The Glass-Chek PRO can locate a Low-E coating on a double-pane window from a single side. This is a significant advantage while testing multi-story buildings where you only have access to the inside of the window. Triple Pane Thickness Measurement: Measure glass, air space, and overall IG thickness of triple pane windows - all at the single push of a button. Identify Types of Low-E Coatings and Determine Silver Layers: When the Glass-Chek PRO detects a Low-E coating, it displays whether it is a hard or soft coat Low-E. When a soft coat is detected, the meter classifies it as single, double, or triple silvered. This enables users to identify types of Low-E coatings in the factory or the field, and it's handy for glass replacement applications. The Glass-Chek PRO and Glass-Chek ELITE are the only tools to tell you the precise coating needed to replace glass properly.
