

FHC Card Low-E Detector Disposable

Item No. FHCAE2200

Features, Advantages, and Benefits

- Confirms Presence of Low-E Coating
- Will Not Scratch or Scuff Glass Surface
- Convenient Size, Easily Fits in Pocket
- Essential Glaziers Tool

Description: OverviewThe AE2200 Low-E CARD® is a disposable model that will allow 1,000 tests to be conducted. It will confirm if there is a Low-E coating present on the

piece of glass you place it against. The AE2200 will test both sides of the piece of glass from one side. It will not differentiate which side has the coating but it will confirm if a Low-E coating is present. There are no metal contacts to scratch the glass surface. Therefore it is safe to use on all glass, even if the glass is dirty or has a label or other insulating layer on it. After 1,000 tests, simply dispose of the card.
